Exercise 05.2:Assignment :Deploying a sample webapp using CodeDeploy on groups of instances

Step 1: Create 2 sets of EC2 instances Ex: Production (2) and QA (2) and tag them accordingly

Step 2: Install the required softwares while creating the instances

```
#!/bin/bash
sudo yum update -y
sudo yum install -y ruby wget
wget https://aws-codedeploy-ap-south-1.s3.ap-south-1.amazonaws.com/latest/install
chmod +x ./install
sudo ./install auto
```

Step 3: Use 2 deployment groups(production instances and QA instances) in CodeDeploy and deploy it to both the environments
Step 4: Access one of the instances from web to check if the application has been deployed successfully
